#### **APPENDIX A – NATIONAL TELEMETRY SITE TRAFFIC PROFILE REPORT**

## 1. PREFACE

Traffic information is fundamental to the management of the State Highway network. The measure of the traffic demand imposed on the network enables the New Zealand Transport Agency (NZTA) to optimise investment decision.

The purpose of this booklet is to provide summary information of NZTA traffic counting programme on the State Highway Network and detailed information of each count site.

The information contained in this publication is derived from NZTA's state highway traffic data collection system. The system consists of a range of equipment that includes sophisticated weigh-in-motion and vehicle classification collection, telemetry and simple portable tube traffic counters.

The data collection and processing, for the permanent weigh-in-motion (WiM) and continuously monitored telemetry sites is managed by NZTA's National Office in Wellington. The remaining sites, which represent the large majority of the sites throughout New Zealand, are counted at defined intervals throughout the year as part of the NZTA's regional traffic counting programmes managed by NZTA's regional offices.

NZTA welcomes any feedback on this publication. This document is available on the NZTA website at <http://www.nzta.govt.nz/resources/state-highway-traffic-volumes/>

## 2. DISCLAIMER

The traffic data contained in this document are intended to be used as an approximate indication of traffic flows at counting sites on state highways throughout New Zealand. Most sites are counted two or four times a year, with other sites counted on a continuous basis.

The limitations of the traffic counters and their installation, counting methods used, sensitivity of equipment, congestion effects, and various analysis procedures contribute to the error margin. These factors should be taken into account when using the AADT data.

For detailed design and project evaluation purposes, the actual traffic counts upon which this document is based can be obtained from the appropriate NZTA Region office.

NZTA and its employees or agents involved in preparation and publication of this document cannot accept liability for its contents or for any consequences arising from its use. People using the contents of this document should apply, and rely upon, their own skill and judgement. The contents should not be used in isolation from other sources of advice and information.

### 3. OVERVIEW

The traffic data collection programme at the NZTA is a collaborative effort involving NZTA's regional offices and NZTA's national office.

#### National Telemetry Traffic Monitoring Contract

There were 118 nationally managed, continuously counted telemetry sites in operation during the 2014 calendar year. These are located in 97 different geographic locations around New Zealand, with some sites being monitored in each direction separately.

These sites are located at carefully selected locations. They are installed with permanent power and communications. This allows continuous data to be collected regularly without visiting the site.

These continuous counts help the NZTA to understand travel patterns. They allow the state highway traffic monitoring system (TMS) to convert short duration counts elsewhere on the network into better estimates of annual conditions.

#### Regional Traffic Monitoring Contracts

There were 1,449 traffic counting sites managed by 7 NZTA Regional Offices during 2014. There are also 352 virtual sites used to cover the network.

#### Site Summary

The table below shows the number of national telemetry sites and counting sites managed by the regional office in each NZ Transport Agency region in 2014.

	<b>Region</b>	<b>NZTA Office</b>	<b>National Telemetry Site</b>	<b>Region Managed counting site</b>	<b>Virtual Site</b>	<b>Total</b>
1	Northland		4	68	1	73
2	Auckland	Auckland	14	361	188	563
3	Waikato		15	164	26	205
4	Bay of Plenty	Hamilton	14	72	44	130
5	Gisborne		3	18	0	21
6	Hawkes Bay	Napier	4	46	13	63
7	Taranaki		4	48	6	58
8	Manawatu - Wanganui	Wanganui	9	100	3	112
9	Wellington		10	111	38	159
10	Nelson / Marlborough	Wellington	7	35	5	47
11	Canterbury	Christchurch	11	194	16	221
12	West Coast		4	50	2	56
13	Otago	Dunedin	14	121	2	137
14	Southland		5	62	7	74
	Total		118	1450	351	1919

## 4. EQUIPMENT USED

### National Telemetry Traffic Monitoring Contract

<b>Data collection managed nationally by NZTA National Office</b>			
Bending Plates Scales (WiM)  (6 Sites)	Dual Inductive Loops  (108 Sites)	Single Inductive Loops  (3 Sites)	Piezo Electric Axle Classifiers  (1 Site)
Axle Loadings	Classification by Length	Count Only	Classification by Axle

### Regional Traffic Monitoring Contracts

<b>Data collection managed regionally by NZTA Regional Offices</b>					
Dual Inductive Loops (705 Site)		Single Inductive Loops (636 Sites)		Pneumatic Tube (110 Sites)	Virtual (351 Sites)
*Continuous	Non Continuous	*Continuous	Non Continuous		
178	527	172	463		
Classification by Length		Count Only		Classification by Axle	Calculated from Adjacent Sites

## 7. TRAFFIC TREND ON STATE HIGHWAYS

The state highway traffic volume growth index is an annual traffic volume change indicator which measures growth rate of **all vehicles'** AADT and heavy vehicles' AADT on a sample of representative points -118 National telemetry traffic counting sites, where data is collected continuously at various locations along the state highway network.

The base for this index is 1.00 in 1989 when our systematic traffic data records began.

It provides an indication of traffic volume changes. Because of the limited sample sizes, this index should be used with caution.

## 8. AADT DATA TABLES

### Column Descriptions for tables to follow

#### ***Region***

This is the NZTA Region, responsible for the specific section of State Highway where the traffic counting site is located.

#### ***SH State Highway***

This is the number given to the state highway on which the site is located.

#### ***RS Reference Stations\****

These are fixed points on the state highway.

#### ***RP Route Position\****

This is the distance from the last reference station to the specific location in kilometres.

#### ***Site Ref***

This is the unique identifier used within NZTA's Traffic Monitoring System (TMS). For further information on how these references are created, please refer to the Traffic Monitoring of State Highways Manual - SM052 on the NZTA website.

<http://www.nzta.govt.nz/resources/traffic-monitoring-state-highways/index.html>

#### ***Description***

This describes the traffic count site location.

#### ***Direction\****

This indicates if the AADT and % Heavy data, is reported separately in the increasing (Inc) and decreasing (Dec) directions or in both directions together.

Example: If you travel from Auckland to Wellington on SH1, you are travelling in the increasing direction, as SH1 starts at Cape Reinga.

#### ***Equipment***

This details the primary equipment type being used to collect traffic data at the specific location. There may be a combination of equipment types used at some sites.

#### ***AADT Annual Average Daily Traffic volume,***

This is an estimate of the average daily traffic for a specified calendar year. The majority of the traffic counts provided in this publication have been undertaken at the particular count site over four or more weeks in the year. They are seasonally adjusted using continuous data obtained from Telemetry Sites. This provides a relatively robust estimate of the annual traffic volume for that location. Other traffic details such as the vehicle composition are available for some sites from the regional contact.

#### ***% Heavy***

This is an estimate of the proportion of the AADT which is deemed a heavy vehicle: i.e. greater than 3.5 tonnes for the current year.

#### ***Accepted Days***

This is the number of days for which valid traffic counts were accepted (after pass quality assurance) at a site for a specified calendar year.

For a site with no actual count data accepted (no accepted days), the AADT was estimated. It includes virtual sites, the sites use other party's summary data, (eg. SCATS count) and sites had no valid counts for a specified calendar year.

\*For further information on NZTA's location referencing system, please refer to "LRMS Manual" on the NZTA website.
